<p>The graph shows a logarithmic scale for risk (1:10 to 1:10000) on the y-axis and age (13 to 49) on the x-axis. A diagonal line represents the 'Cut off' risk level. A vertical bar at age 31 shows the patient's risk is significantly below the cut-off line.</p>	<p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p>			
	<p>Trisomy 13/18 The calculated risk for trisomy 13/18 is < 1:10000, which indicates a low risk.</p>
