After the result of the Trisomy 21 test (with NT) it is expected that among 3452 women with the same data, there is one woman with a trisomy 21 pregnancy and 3451 women with not affected pregnancies.

The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical

approaches and have no diagnostic value!

The patient combined risk presumes the NT

measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).
