**(U.P)**

Prisca 5.1.0.17  
**Date of report: 23/05/23**

Patient data			
Name	MRS. PRATIKSHA	Patient ID	
Birthday	16/07/92	Sample ID	2305042712/NOD
Age at sample date	30.8	Sample Date	22/05/23
Gestational age	12 + 2		
Correction factors			
Fetuses	1	IVF	no
Weight	65	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	no
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	2.21 mIU/ml	0.68	Gestational age 12 + 0
fb-hCG	89.4 ng/ml	1.99	Method CRL Robinson
Risks at sampling date			Scan date 20/05/23
Age risk		1:572	Crown rump length in mm 56
Biochemical T21 risk		1:284	Nuchal translucency MoM 0.61
Combined trisomy 21 risk		1:1721	Nasal bone present
Trisomy 13/18 + NT		<1:10000	Sonographer DR. ANAMIKA
			Qualifications in measuring NT M.D
Risk		Trisomy 21	
<p>The graph plots risk on a logarithmic scale from 1:10 to 1:10000 against age from 13 to 49. A diagonal cut-off line separates the red (above cut-off) and yellow (below cut-off) regions. The patient's risk is in the green region, below the cut-off.</p>		<p><b>The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.</b></p> <p>After the result of the Trisomy 21 test (with NT) it is expected that among 1721 women with the same data, there is one woman with a trisomy 21 pregnancy and 1720 women with not affected pregnancies.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p> <p>The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).</p> <p>The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!</p>	
Trisomy 13/18 + NT			
<p><b>The calculated risk for trisomy 13/18 (with nuchal translucency) is &lt; 1:10000, which represents a low risk.</b></p>
