

JITM Diagnostics

Patient data				
Name		MRS. AMBIKA	Patient ID	
Birthday		22/12/2003	Sample ID	
Age at sample date		21.4	Sample Date	
Gestational age		12 + 5	31/05/2025	
Correction factors				
Fetuses	1	IVF	no	
Weight	61	diabetes	no	
Smoker	no	Origin	Asian	
Previous trisomy 21 pregnancies		no		
Biochemical data			Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age	
PAPP-A	4.22 mIU/ml	0.99	12 + 3	
fb-hCG	45.2 ng/ml	1.04	Method	
Risks at sampling date			CRL Robinson	
Age risk	1:1073		Scan date	
Biochemical T21 risk	1:6067		29/05/2025	
Combined trisomy 21 risk	<1:10000		Crown rump length in mm	
Trisomy 13/18 + NT	<1:10000		62	
Risk			Nuchal translucency MoM	
			0.81	
			Nasal bone	present
			Sonographer	DR. P.S. UPPAL
			Qualifications in measuring NT	M.D
Trisomy 21				
The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!				
Trisomy 13/18 + NT				
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
