Risk		Trisomy 21
1:10		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.
1:100		After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy.
1:250		The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.
1:1000		Please note that risk calculations are statistical approaches and have no diagnostic value!
1:10000		The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).
		The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
