Risks at sampling date			Scan date 7/02/2025
Age risk		1:1042	Crown rump length in mm 54
Biochemical T21 risk		1:1551	Nuchal translucency MoM 1.60
Combined trisomy 21 risk		1:663	Nasal bone present
Trisomy 13/18 + NT		<1:10000	Sonographer DR. SANDEEP KR. VERMA MBBS
			Qualifications in measuring NT MD
Trisomy 21			
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 663 women with the same data, there is one woman with a trisomy 21 pregnancy and 662 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
