

J.I.T.M. DIAGNOSTICS

| Patient data   |             |                 |                                    |
|--|-------------|-----------------|------------------------------------|
| Name   | MRS. DIKSHA | Patient ID      |                                    |
| Birth day  | 20/04/2002  | Sample ID       | 2503001235/NOD                     |
| Age at sample date   | 22.9        | Sample Date     | 1/03/2025                          |
| Gestational age  | 11 + 2      |                 |                                    |
| Correction factors   |             |                 |                                    |
| Fetuses  | 1           | IVF             | no                                 |
| Weight   | 60          | diabetes        | no                                 |
| Smoker   | no          | Origin          | Asian                              |
| Previous trisomy 21 pregnancies  |             |                 | no                                 |
| Biochemical data   |             | Ultrasound data |                                    |
| Parameter  | Value       | Corr. MoM       |                                    |
| PAPP-A   | 1.51 mIU/ml | 0.69            | Gestational age 10 + 5             |
| fb-hCG   | 32.4 ng/ml  | 0.63            | Method CRL Robinson                |
| Risks at sampling date   |             |                 | Scan date 25/02/2025               |
| Age risk   |             | 1:987           | Crown rump length in mm 39.8       |
| Biochemical T21 risk   |             | 1:7162          | Nuchal translucency MoM 0.80       |
| Combined trisomy 21 risk   |             | <1:10000        | Nasal bone present                 |
| Trisomy 13/18 + NT   |             | <1:10000        | Sonographer DR. NEERU BHARDWAJ     |
|  |             |                 | Qualifications in measuring NT M.D |
| Trisomy 21   |             |                 |                                    |
| <p><b>The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.</b></p> <p>After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p> <p>The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).</p> <p>The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!</p> |             |                 |                                    |
| Trisomy 13/18 + NT   |             |                 |                                    |
| <p><b>The calculated risk for trisomy 13/18 (with nuchal translucency) is &lt; 1:10000, which represents a low risk.</b></p>   |             |                 |                                    |
