| Risk | | Trisomy 21 | |
| 1:10 | | The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. | |
| 1:100 | | After the result of the Trisomy 21 test (with NT) it is expected that among 7448 women with the same data, there is one woman with a trisomy 21 pregnancy and 7447 women with not affected pregnancies. | |
| 1:250 | | The free beta HCG level is high. | |
| 1:1000 | | The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. | |
| 1:10000 | | Please note that risk calculations are statistical approaches and have no diagnostic value! | |
| | | The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). | |
| | | The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value! | |

| Trisomy 13/18 + NT | | | |
| The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk. | | | |
