| <p>The graph plots risk levels on the y-axis (1:10, 1:100, 1:250, 1:1000, 1:10000) against age on the x-axis (13 to 49). A diagonal line represents the 'Cut off' risk level. A vertical bar at age 31.8 shows the patient's risk is below the cut-off.</p> | | <p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</p> <p>After the result of the Trisomy 21 test it is expected that among 3020 women with the same data, there is one woman with a trisomy 21 pregnancy and 3019 women with not affected pregnancies.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p> | | |
| Trisomy 13/18 | | <p>The calculated risk for trisomy 13/18 is < 1:10000, which indicates a low risk.</p> | | |
