<p>The chart shows age risk on the y-axis (1:10000 to 1:10) and age on the x-axis (13 to 49). A diagonal line represents the cut-off. The area below the cut-off is green (below cut off), the area between the cut-off and the age risk line is yellow (Below Cut Off, but above Age Risk), and the area above the cut-off is red (above cut off). The patient's risk is indicated by a vertical bar at age 32.4, which is below the cut-off line.</p>		<p>The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among 2368 women with the same data, there is one woman with a trisomy 21 pregnancy and 2367 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p>	
Trisomy 13/18			
<p>The calculated risk for trisomy 13/18 is < 1:10000, which indicates a low risk.</p>
