JITM Diagnostics

Patient data			
Name	MRS. NAZREEN		Patient ID
Birthday	1/01/1996		Sample ID
Age at sample date	29.2		Sample Date
Gestational age	13 + 1		
Correction factors			
Fetuses	1	IVF	no
Weight	77	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	no
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	5.79 mIU/ml	1.52	13 + 0
fb-hCG	11.2 ng/ml	0.29	Method
Risks at sampling date			CRL Robinson
Age risk	1:727		Scan date
Biochemical T21 risk	<1:10000		26/02/2025
Combined trisomy 21 risk	<1:10000		Crown rump length in mm
Trisomy 13/18 + NT	<1:10000		70.2
			Nuchal translucency MoM
			0.68
			Nasal bone
			present
			Sonographer
			DR. NIKITA RANGLANI
			Qualifications in measuring NT
			M.D
Risk		Trisomy 21	
		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The free beta HCG level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
