J.I.T.M. DIAGNOSTICS

Patient data			
Name		MRS. MAMTA	Patient ID
Birthday		15/06/1999	Sample ID
Age at sample date		25.6	Sample Date
Gestational age		12 + 0	2501021338/NOD
14/01/2025			
Correction factors			
Fetuses	1	IVF	no
Weight	61	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	no
Biochemical data			Ultrasound data
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	1 mIU/ml	0.32	11 + 4
fb-hCG	34 ng/ml	0.72	Method
Risks at sampling date			CRL Robinson
Age risk			Scan date
Biochemical T21 risk			11/01/2025
Combined trisomy 21 risk			Crown rump length in mm
Trisomy 13/18 + NT			50
Risk			Nuchal translucency MoM
			0.67
			Nasal bone
			present
			Sonographer
			DR. RAHUL CHOUDHARY
			Qualifications in measuring NT
			M.D
			Trisomy 21

Trisomy 21

The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.

After the result of the Trisomy 21 test (with NT) it is expected that among 4053 women with the same data, there is one woman with a trisomy 21 pregnancy and 4052 women with not affected pregnancies.

The PAPP-A level is low.

The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.

Please note that risk calculations are statistical approaches and have no diagnostic value!

The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).

The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!

Trisomy 13/18 + NT

The calculated risk for trisomy 13/18 (with nuchal translucency) is $< 1:10000$, which represents a low risk.
