

Patient data			
Name	MRS. SAVITA		Patient ID
Birthday	22/12/2000		Sample ID
Age at sample date	24.1		Sample Date
Gestational age	12 + 5		
Correction factors			
Fetuses	1	IVF	no
Weight	60	diabetes	no
Smoker	no	Origin	Asian
Previous trisomy 21 pregnancies		no	
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	9.98 mIU/ml	2.30	Gestational age
fb-hCG	123 ng/ml	2.80	Method
			CRL Robinson
			Scan date
			12/02/2025
Risks at sampling date			Crown rump length in mm
Age risk			61.1
Biochemical T21 risk			Nuchal translucency MoM
1:1765			0.69
Combined trisomy 21 risk			Nasal bone
1:8520			present
Trisomy 13/18 + NT			Sonographer
<1:10000			Qualifications in measuring NT
			..
			..
Trisomy 21			
The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 8520 women with the same data, there is one woman with a trisomy 21 pregnancy and 8519 women with not affected pregnancies. The free beta HCG level is high. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!			
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
