## JITM Diagnostics

Patient data			Ultrasound data	
Name	MRS. KHUSHBOO KUMARI		Gestational age	13 + 2
Birthday		24/03/2000	Method	CRL measurements
Age at delivery		25.0	Crown rump length in mm	74
Patient ID		410011619/NOD		1/10/2024
Previous trisomy 21 pregnancies no			Nuchal translucency MoM	0.82
			Nuchal translucency	1.50 mm
Correction factors			Nasal bone	present
Fetuses	1 diabetes	no	Sonographer	DR. SHIFALI
Weight	50 Origin	Asian	Qualifications in measuring NT	M.D
Smoker	no IVF	no		
Biochemical data			Risks at term	
Sample Date 6/10/2024			Age risk	1:1377
			Trisomy 21 risk	1:7001
Parameter	Value		Combined trisomy 21 risk	<1:10000
		1.15	Trisomy 18 risk	<1:10000
AFP HCG	36.1 ng/ml 51763 mlU/ml	1.15 0.98	,	
	0.1.000,			
uE3	0.78 ng/ml	1.15	Trisomy 21	
Risk 1:10 1:00 1:50 Cut off 1:10000 1:1000 1:10			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 18       Neural tube defects         The calculated risk for trisomy 18 (with nuchal translucency) is < 1:10000, which represents a low risk.				
below cut off Below Cut Off, but above Age Risk above cut off
