Risk	Trisomy 21			
<p>The graph plots risk (y-axis, 1:10000 to 1:10) against age (x-axis, 13 to 49). A curve represents the age risk. A horizontal line at 1:250 is labeled 'Cut off'. The area above the cut-off is red, the area between the cut-off and the age risk curve is yellow, and the area below the age risk curve is green. A vertical line at age 28.8 indicates the patient's risk, which is in the green area (below the cut-off).</p>	<p><b>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</b></p> <p>After the result of the Trisomy 21 test it is expected that among 810 women with the same data, there is one woman with a trisomy 21 pregnancy and 809 women with not affected pregnancies.</p> <p>The free beta HCG level is high.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.</p> <p>Please note that risk calculations are statistical approaches and have no diagnostic value!</p>			
Trisomy 13/18				
<p><b>The calculated risk for trisomy 13/18 is &lt; 1:10000, which indicates a low risk.</b></p>
