## CHROMOSOME ANALYSIS

Specimen	: Sample quality is optimum for the test.
----------	---

### CYTOGENETICS REPORT

---

METAPHASES COUNTED	: 30	CULTURE TYPE	: 72 HRS PHA STIMULATED
METAPHASES ANALYZED	: 30	BANDING TECHNIQUE	: GTG
METAPHASES KARYOTYPED	: 30	BANDING RESOLUTION	: 400

---

### RESULTS

**KARYOTYPE** : [46,XX](#)

**COMMENTS** : The karyotype report is enclosed herewith and is [normal](#).

We examined the metaphases for any structural or numerical chromosomal abnormalities. We found no evidence of such defects in the metaphases. The metaphases showed normal and uniform patterns across the sample.

The blood culture was set in Karyomax (Gibco, USA) for 72 hours.

Leucocyte culture metaphase karyotype: G'banding
