## **Down's Syndrome Risk**

## The calculated risk for Trisomy 21 is below the cut off which represents a low risk.

After the result of the Trisomy 21 test it is expected that among 9964 women with the same data, there is one woman with a trisomy 21 pregnancy and 9963 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.

Please note that risk calculations are statistical approaches and have no diagnostic value!

Neural tube defects ri	sk	Risk for trisomy 18The calculated risk for trisomy 18 is < 1:10000, which indicates a low risk.		
The corrected MoM AFF risk area for neural tube	9 (0.94) is located in the low defects.
