**Down's Syndrome Risk**

**The calculated risk for Trisomy 21 is below the cut off which represents a low risk.**  
 After the result of the Trisomy 21 test it is expected that among 328 women with the same data, there is one woman with a trisomy 21 pregnancy and 327 women with not affected pregnancies.  
 The HCG level is high.  
 Inhibin-A is high.  
 The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.  
 Please note that risk calculations are statistical approaches and have no diagnostic value!
