Age risk	1:758			Nuchal translucency MoM 1.08	
Biochemical T21 risk	<1:10000		Nasal bone		present
Combined trisomy 21 risk <1:10000			Sonographe	r	DR. SANDEEP DUA
				ns in measuring NT	M.D
KISK 1:10			Trisomy 21 The calculated risk for Trisomy 21 (with nuchal		
1:1000 1:10000 1:110000 1:1			translucency) is below the cut off, which indicates a low risk.  After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy.  The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!  The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).  The laboratory can not be hold responsible for their impact on the risk assessment! Calculated risks have no diagnostic value!		
The calculated risk for translucency) is < 1:100 risk.
