

JITM Diagnostics

Patient data			
Name	MRS. NIDHI GARG		Patient ID
Birthday	23/06/1989	Sample ID	2505044153/NOD
Age at sample date	35.9	Sample Date	22/05/2025
Gestational age	12 + 3		
Correction factors			
Fetuses	1	IVF	no
Weight	77.8	diabetes	no
Smoker	no	Origin	Asian
Previous trisomy 21 pregnancies	no		
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	1.47 mIU/ml	0.52	12 + 1
fb-hCG	80.2 ng/ml	1.91	Method
			CRL Robinson
			Scan date
			20/05/2025
			Crown rump length in mm
			58
			Nuchal translucency MoM
			0.53
			Nasal bone
			present
			Sonographer
			DR. R.S. MUKUL
			Qualifications in measuring NT
			M.D
Risks at sampling date		Trisomy 21	
Age risk	1:221	The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 415 women with the same data, there is one woman with a trisomy 21 pregnancy and 414 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Biochemical T21 risk	1:64		
Combined trisomy 21 risk	1:415		
Trisomy 13/18 + NT	<1:10000		
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
