

JITM Diagnostics

Patient data			
Name	MRS. PRIYANKA		Patient ID
Birthday	9/03/2001		Sample ID
Age at sample date	24.3		Sample Date
Gestational age	12 + 6		
Correction factors			
Fetuses	1	IVF	no
Weight	52	diabetes	no
Smoker	no	Origin	Asian
Previous trisomy 21 pregnancies		no	
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	2.71 mIU/ml	0.50	Gestational age
fb-hCG	29.6 ng/ml	0.65	Method
			CRL Robinson
			Scan date
			16/06/2025
Risks at sampling date			Crown rump length in mm
			65
Age risk	1:1001		Nuchal translucency MoM
Biochemical T21 risk	1:2883		1.02
Combined trisomy 21 risk	<1:10000		Nasal bone
Trisomy 13/18 + NT	<1:10000		present
			Sonographer
			DR. NEERU CHOUDHARY
			Qualifications in measuring NT
			M.D
Trisomy 21			
The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!			
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
