

JITM Diagnostics

Patient data			
Name	MRS. TANVI SAXENA		Patient ID
Birthday	1/03/1993		Sample ID
Age at sample date	32.2		Sample Date
Gestational age	12 + 3		
Correction factors			
Fetuses	1	IVF	no
Weight	56.7	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	no
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	3.15 mIU/ml	0.77	12 + 2
fb-hCG	51.9 ng/ml	1.12	Method
			CRL Robinson
			Scan date
			26/05/2025
Risks at sampling date			Crown rump length in mm
			59.8
Age risk			Nuchal translucency MoM
1:464			0.64
Biochemical T21 risk			Nasal bone
1:1228			present
Combined trisomy 21 risk			Sonographer
1:6651			DR. VINOD KUMAR
Trisomy 13/18 + NT			Qualifications in measuring NT
<1:10000			M.D
			Trisomy 21 The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 6651 women with the same data, there is one woman with a trisomy 21 pregnancy and 6650 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
