

JITM Diagnostics

Patient data			
Name	MRS. AMBIKA	Patient ID	
Birthday	22/12/2003	Sample ID	2505060931/NOD
Age at sample date	21.4	Sample Date	31/05/2025
Gestational age	12 + 5		
Correction factors			
Fetuses	1	IVF	no
Weight	61	diabetes	no
Smoker	no	Origin	Asian
Previous trisomy 21 pregnancies	no		
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	4.22 mIU/ml	0.99	
fb-hCG	45.2 ng/ml	1.04	
Risks at sampling date			
Age risk	1:1073		Gestational age
Biochemical T21 risk	1:6067		12 + 3
Combined trisomy 21 risk	<1:10000		Method
Trisomy 13/18 + NT	<1:10000		CRL Robinson
			Scan date
			29/05/2025
			Crown rump length in mm
			62
			Nuchal translucency MoM
			0.81
			Nasal bone
			present
			Sonographer
			DR. P.S. UPPAL
			Qualifications in measuring NT
			M.D
Risk			Trisomy 21
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
