

JITM Diagnostics

Patient data			
Name	MRS. GARIMA JAIN		Patient ID
Birthday	12/09/1993		Sample ID
Age at sample date	31.6		Sample Date
Gestational age	12 + 6		
Correction factors			
Fetuses	1	IVF	no
Weight	58.1	diabetes	no
Smoker	no	Origin	Asian
Previous trisomy 21 pregnancies	no		
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	3.17 mIU/ml	0.66	
fb-hCG	50.6 ng/ml	1.16	
Risks at sampling date			
Age risk	1:519		Gestational age
Biochemical T21 risk	1:900		Method
Combined trisomy 21 risk	1:5087		Scan date
Trisomy 13/18 + NT	<1:10000		Crown rump length in mm
			68.3
			Nuchal translucency MoM
			0.75
			Nasal bone
			present
			Sonographer
			DR. (MRS.) NEERJA CHOPRA
			Qualifications in measuring NT
			MD
Risk			Trisomy 21
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 5087 women with the same data, there is one woman with a trisomy 21 pregnancy and 5086 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
