IMMUNITY

Immunity is your body's natural ability to fight infections. When your immune system is overactive against common allergens, such as pollen grains, dust etc., then it can lead to the development of allergies. This profile will check if naturally occurring antibodies of your immune system are within the normal healthy range. An abnormal report indicates immune system related disorders, or may indicate presence of some other medical condition.

Total IgE: 569.08 IU/ml

METHOD: CHEMILUMINESCENCE IMMUNOASSAY (CLIA)

● HIGH

Your immune system produces different forms of IgE antibodies, each of which is specific to a specific allergen. For eg., if you are allergic to cat dander, then you have IgE antibodies specific for cat dander. Total IgE test (also known as IgE allergy test) tells the total amount of IgE in your blood, but does not measure any specific forms of IgE; thus this test can detect the presence of allergies, but cannot identify the cause of allergy.

Abnormal results may indicate : Presence of allergies- Your immune system is overactive against some allergens, and an allergic response is triggered in your body when you come in contact with these allergens. Once causative allergens are identified (these can be some pollen, dust mites, some specific food etc.), then you should take measures to avoid exposure to these allergens. You can consult an allergist/immunologist who may prescribe medicines or allergy shots (a form of immunotherapy).

ALLERGY PANEL

Allergy is your body's reaction to things like pollen, animal hair, dust, certain medicines etc. They are usually harmless to others. These things which cause allergic reactions are called allergens.

Allergy Panel Legend

Allergy levels are based on the concentration of specific allergens in your system. Values below **0.35** are considered Normal (N), while values above **0.35** indicate a High (H) allergic reaction

Recommended Action Plan

Carry Emergency Medication

Due to allergies to Acacia Arabica, Chalk Powder, Goat Dander, Jute Dust, Cannabis Sativa, always carry epinephrine auto-injector and antihistamines

Consult with Allergist

Schedule an appointment with an allergist for a comprehensive management plan and potentially immunotherapy options.

Food Challenge Test

Consider a supervised food challenge test for Acacia Arabica to confirm the severity of moderate sensitivity.

Nutrition Consultation

Meet with a dietitian to create a balanced meal plan that safely avoids your allergens while maintaining proper nutrition.

Diet and Lifestyle Tips

Avoid exposure to things you might have an allergic reaction to

Get blood tests like allergen specific IgE test done to find out specific things you might be sensitive to.

In case of an allergic reaction, consult your doctor to find out the right medicines to relieve your symptoms.

There are certain treatments like immunotherapy where you are given mild exposure to allergens and then gradually increase to a point where the reaction isn't that bad.
