

Result Down's syndrome screening					
Name		Sample ID		2507011820/NOD	
MRS. RAINU		D.O.B.		20/06/1998	
Patient ID		2507011820/NOD		Age at delivery	
Day of serum taking		7/07/2025		Weight [kg]	
Date of report:		8/07/2025		Previous trisomy 21 pregnancies

Age risk
at term
1:1216

Down's Syndrome Risk
The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among 3585 women with the same data, there is one woman with a trisomy 21 pregnancy and 3584 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!

Neural tube defects risk	Risk for trisomy 18
The corrected MoM AFP (1.12) is located in the low risk area for neural tube defects.	The calculated risk for trisomy 18 is < 1:10000, which indicates a low risk.

			Prisca 5.2.0.13
below cut off	Below Cut Off, but above Age Risk	above cut off
