

Patient data			
Name	MRS. AANCHAL JAIN		Patient ID
Birthday	24/10/1990	Sample ID	2505054673/NOD
Age at sample date	34.6	Sample Date	27/05/2025
Gestational age	12 + 3		
Correction factors			
Fetuses	1	IVF	no
Weight	69.6	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	no
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	1.71 mIU/ml	0.53	12 + 3
fb-hCG	13.2 ng/ml	0.30	Method
			CRL Robinson
			Scan date
			27/05/2025
Risks at sampling date			Crown rump length in mm
Age risk	1:296		61
Biochemical T21 risk	1:3731		Nuchal translucency MoM
Combined trisomy 21 risk	<1:10000		0.76
Trisomy 13/18 + NT	1:5185		Nasal bone
			present
			Sonographer
			DR. (MRS.) NEERJA CHOPRA
			Qualifications in measuring NT
			MD
Risk			Trisomy 21
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The free beta HCG level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT			
The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:5185, which represents a low risk.
